

## The Vampire Breast Lift

### HOW DOES IT WORK?

The PRFM stimulates new blood flow with new blood vessels not from simple dilatation of the existing blood vessels (neovascularization)

The growth factors activate Uni potent stem cells to cause:

- 1.fibroblast proliferation, migration and activation
- 2.remodeling
- 3.neovascularization
- 4.Adipocyte multiplication and enlargement

The result is increase in the number of endothelial cells leading to a fuller, and firmer breast.

### RESULTS

After about two months you will notice that the skin is healthier and younger looking with a glow due to new blood vessel formation. The nipples will look pinker and firmer. The breasts will seem to be lifted as compared to its previous shape.

If you have stretch marks, they will look much improved and sometimes disappear.

***The breasts will be fuller, firmer and will appear to be lifted for a more youthful and beautiful look.***

### **From Downtown Orlando:**

*on I-4 W to exit 74A onto Sandlake Rd, (Turn Right), at the first traffic light (turkey lake rd) turn left. Turn Right at the light for Dr. Phillips Hospital Emergency room, turn left at the stop sign into Sandlake Medical Park. Turn left into the plaza, the office is located on your right.*
